Recuperation to Immunisations

By

Jennifer Beasley ND

Recuperation to Immunisations

By Jennifer Beasley ND

During my years of practise I have dealt directly or indirectly with either allopathic toxicity or vaccinated related cases. I am sure there is more information we do not know when dealing with the consequences of immunisation for the individual and society. In exploring the possibilities for neurological and immunological recuperation from immunisations I found many considerations.

Recuperation

Recuperation is a natural state. Our ability to recuperate is a subconscious neurological value and an important part of how we express life. As a part of our genetic programming, recuperation is only a challenge for us if there is something stopping our natural recuperative processes.

There are related contexts that challenge our ability to recuperate. It is important for the long term healing of the client and as practitioners in the wellness industry to be aware of how our natural recuperation ability is challenged when exposed to a number of foreign materials, viruses, proteins and other chemicals that may be found in regular vaccines.

As practitioners in the wellness industry it is not our legal right to medically advise our clients or their families on the choice of their immunization management. What we can do is offer them as much information as we are able, and to assist them in gathering information to make an informed choice of their own. If the orthodox vaccination schedule is what they ultimately choose, there are some important health parameters we as Kinesiologists can assess prior to and after their immunizations. The ability to recuperate from a vaccination is of

paramount importance to the long-term health of the individual and therefore the best place to start.

Recuperation and a Neuro-Training session incorporating Kinesiology.

Innately our attention is drawn to the process of how we achieve the healthy state we want. This involves a subconscious value to express Recuperation as a natural on going state. Recuperation is a process that deserves greater attention. It is also a more neutral concept. When we speak of Recuperation people immediately understand what we are referring to without any need for further interpretation. They also realize, (as they would with the term health), when they don't have it. In their attempt to have better recuperation they necessarily infer that they are healing. Also, in progressing toward a true recuperative process we need a new set of challenges in how courageous we are and who we say we want to be. *(For more information see the Recuperation workshop module by Neuro-Training Pty Ltd.)*

In general, without referencing to the issue of vaccinations, when "Recuperation" on its own causes a change of muscle response we are not working on a problem with recuperation itself, unless there is obvious genetic disruption, rather, we are finding whatever is stopping or challenging the recuperation process.

"It is important for the long term healing of the client and as practitioners in the wellness industry to be aware of how our natural recuperation ability is challenged when exposed to a number of foreign materials, viruses, proteins and other chemicals that may be found in regular vaccines".

Where does our health come from?

At the turn of the 19th Century Doctors in Homoeopathy named '*Artificial Disease*' to be caused by some kind of drug action. The classification of diseases adopted by Samuel Hahnemann, (Dr of Homoeopathy), includes both acute, chronic and inherited (miasmatic) disease patterns. He believes that prolonged drug use does produce a species of chronic disease patterns that can be most difficult to 'cure' (read, recuperate to), and in his experience, when such have attained a considerable hold on the person, would seem as if no homeopathic preparation could be discovered for their radical cure (recuperation). (Iyer page 33)

Fortunately the application of Kinesiology gives us an available tool to find, re direct, train and then challenge human dis-ease patterns such as a drug induced one.

Health comes from within the person, not from the outside. (Hering's Law). (Kent p 24-29)

The techniques, preparations and remedies we use as practitioners can have a powerful positive influence on how a person heals, given these are applied in the best way, i.e. the most appropriate context for that person. If not, they are simply tools, just like any other. Samuel Hahnemann quotes: The physician is likewise a preserver of health if he knows the things that derange health and cause disease, and how to remove them from a person....". (1)

We as practitioners do not heal the client. The clients themselves do that. If the client can recuperate from what they are challenged by, then long-term health will prevail. Unless we have this basic understanding, use the context of recuperation and kinesiology as a tool to navigate this context, then we are limited in our ability to set the references for that person to best heal themselves.

Conclusion

Orthodox immunisation can create challenges for our current health or affect our health quietly that may go unnoticed for years. It is something that may become too big to defend by our immune system and as a consequence new options for immune adaptation is necessary. Vaccines in the future may be delivered orally, by nasal spray, or transcutaneous by a minimally trained layperson and in a manner that does not require expensive equipment. It may even be in our food such as potatoes and tomatoes.

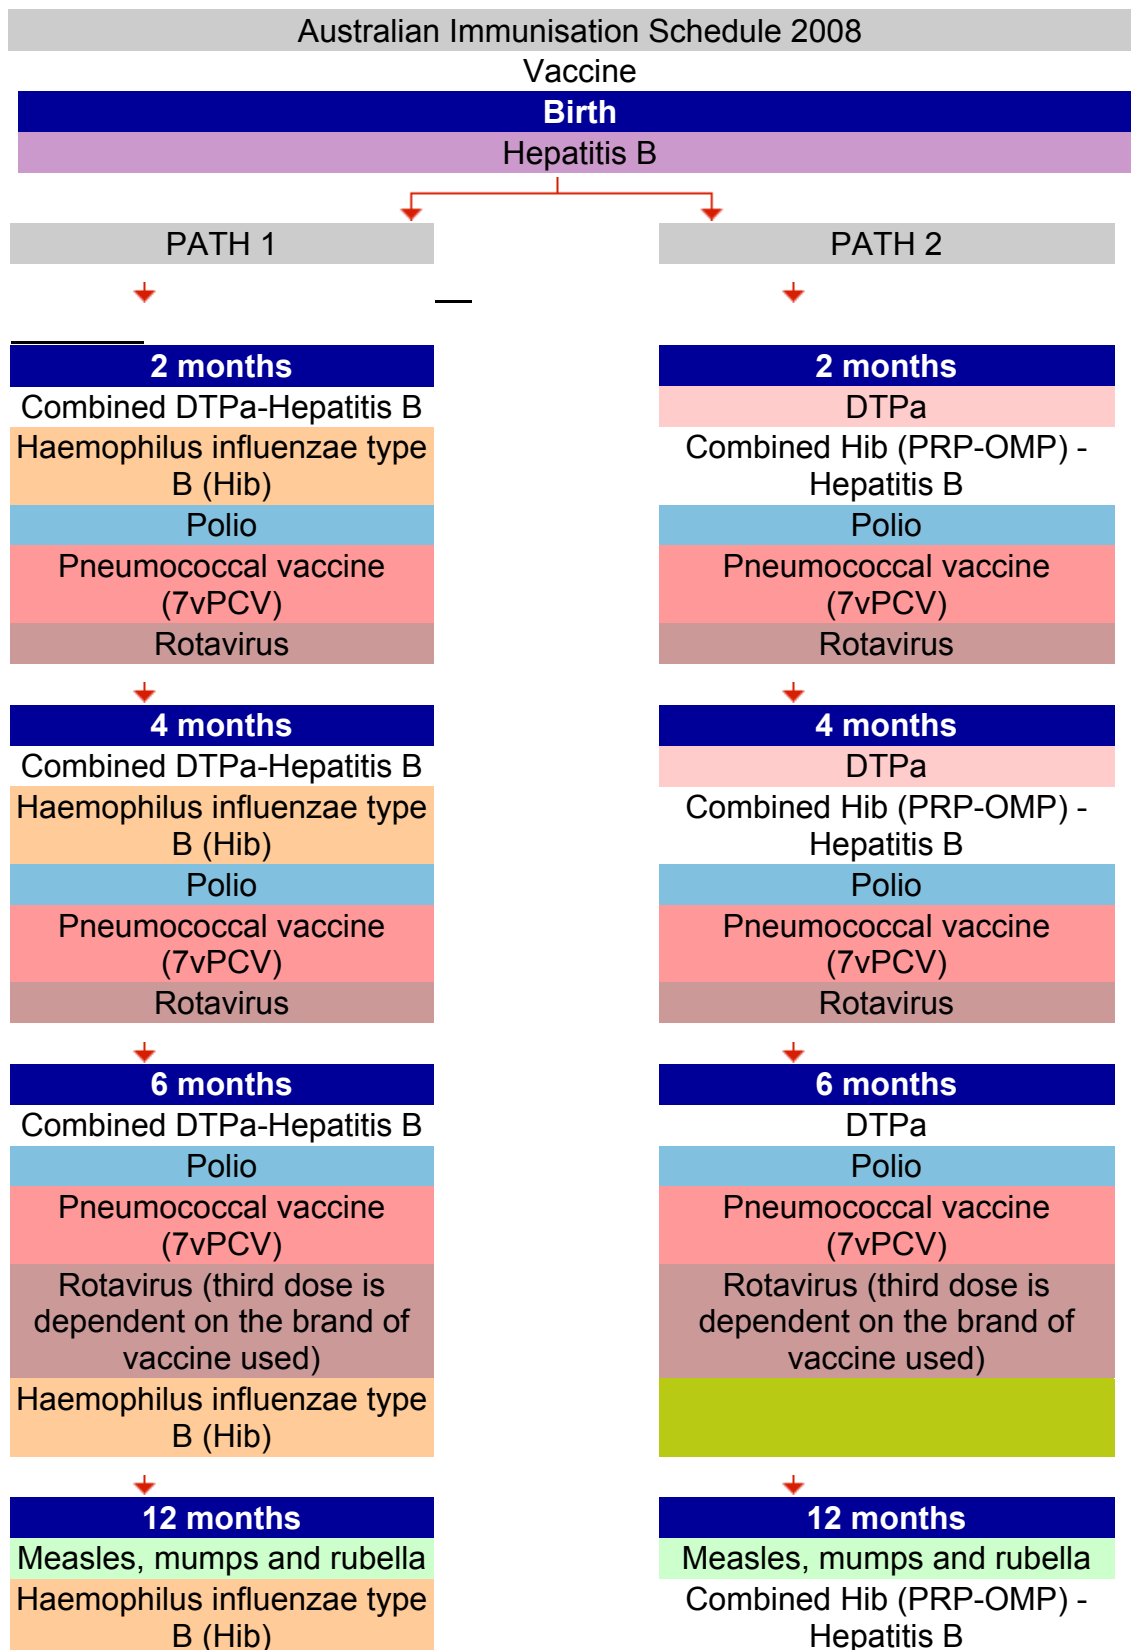

As advanced vaccines and vaccine technologies become available, public education efforts may be required to educate your clients on the possible or unknown consequences. New options using the art of Kinesiology and Neuro-Training is becoming more and more necessary.

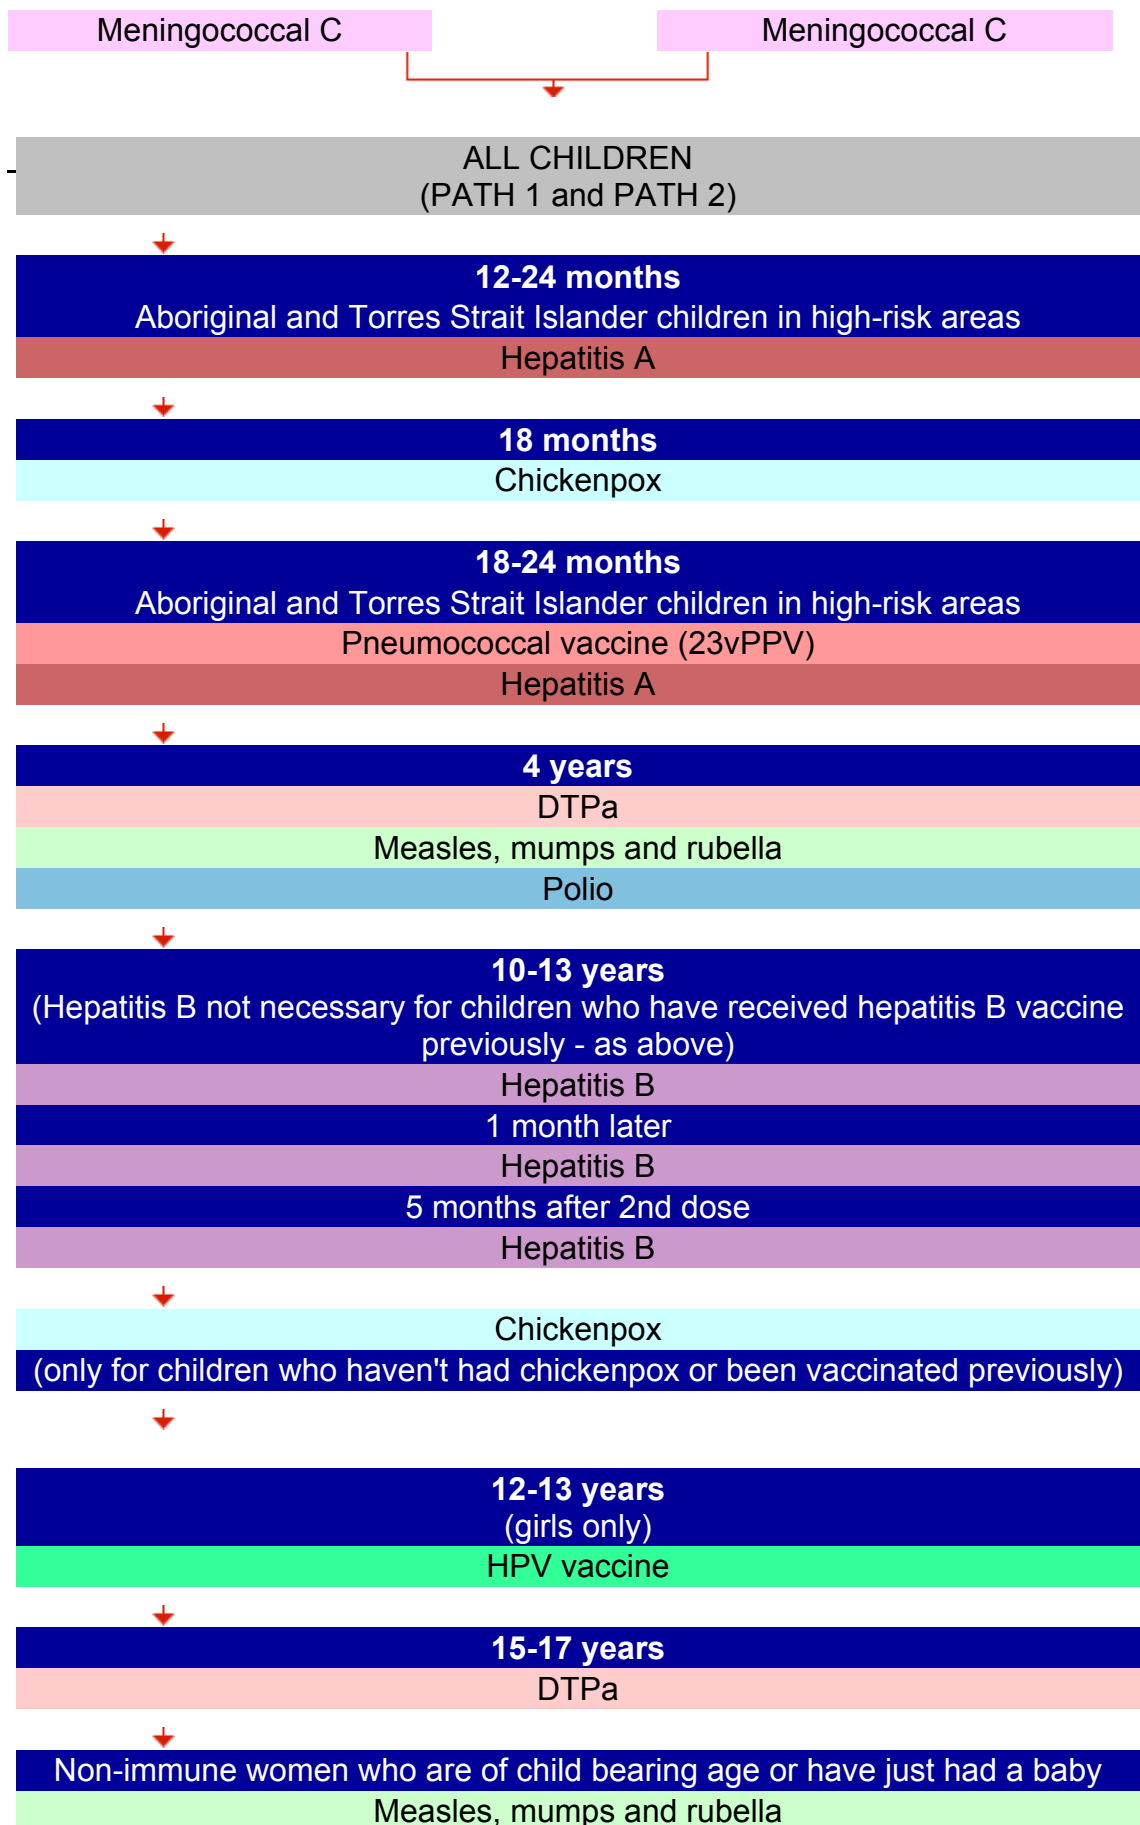

The Context of Recuperation, the context of suppression and the context of long term healing have become even more important for Kinesiologists to use as one of the basic procedures for long term change, immune and neurological adaptation. We can no longer afford to play with the symptoms involved but recognize that behind the symptoms a person presents is a much larger contextual conflict and more so in the future.

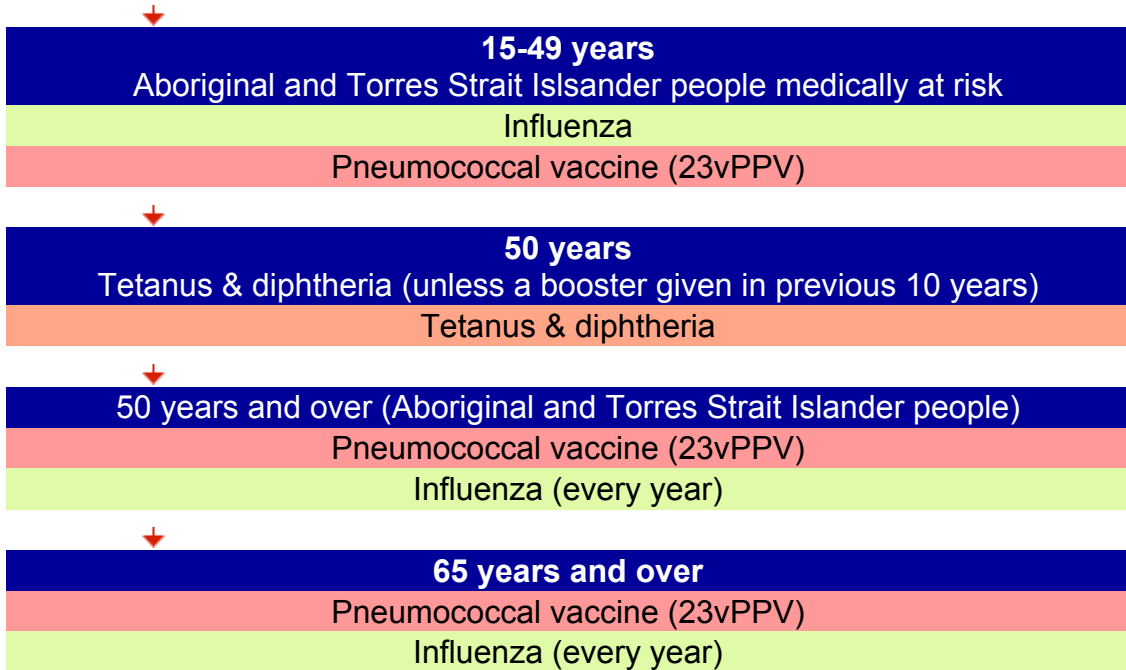

The prospect of training the person's neurology to adapt to the possibilities of serious diseases by the use of vaccines are discussed in my recorded tele conference calls.

Current vaccines

Research suggests that we may be over-vaccinating our children. Some receive **30-40 doses** (higher for aboriginal), of the 16 vaccines by age 6.

Travel Vaccines

If you or your child travels overseas, then you are subject to at least another 7 vaccines with two to three doses of each.

<i>Travellers Vaccines for Children and Adults recommended</i>
• Meningococcal
• Hepatitis A
• Hepatitis B
• Typhoid
• Rabies
• Q fever
• Yellow fever
• Malaria tablets
• Cholera
• Lyssavirus
• Japanese B encephalitis vaccine

Guide to the medical abbreviations used for the vaccines and diseases

Here is a guide to the terms used by doctors and healthcare workers to talk about the various vaccines.

DTPa = combined diphtheria, tetanus, pertussis vaccine containing an acellular pertussis vaccine.

Hep B = Hepatitis B **Hepatitis B**: A two-dose adult-strength hepatitis B vaccine can be used in adolescents.

Hep B^a, Hep^b– alternative schedules for hepatitis B vaccine according to combination formulation used. **Hep B^c**– three-dose primary schedule for Hepatitis B for adolescents not vaccinated in childhood.

Hib = Haemophilus influenzae type B **Hib^d**, and **Hib^e**–alternative schedules for Hib vaccines depending on formulation used.

(HPV) human papilloma virus vaccine *GARDASIL®* free to all women and girls aged between 12 and 26

Influenza = flu vaccine

Meningococcal C = meningococcal C conjugate vaccine (MenCCV) see more references below

MMR = measles, mumps, rubella vaccine

Polio = Inactivated polio vaccine (IPV) is now preferred over oral polio vaccine (OPV) and may be given as part of a combination vaccine incorporating other vaccines due at the same time

(IPV) Inactivated poliomyelitis vaccine

Pertussis = Bordetella pertussis –Whooping cough

Pneumococcal (7vPCV) = A type of pneumococcal vaccine known as 7-valent pneumococcal conjugate vaccine, that helps protect against 7 serotypes of the bacterium.

Pneumococcal (23vPPV) = A type of pneumococcal vaccine known as 23-valent pneumococcal polysaccharide vaccine, that helps protect against 23 serotypes of the bacterium.

PRP-OMP = a type of vaccine against Haemophilus influenzae type B. This type is recommended for all Aboriginal and Torres Strait Islander children.

Rubella = German measles

Td = combined diphtheria and tetanus vaccine

VZVt– varicella vaccination only for children without a history of previous clinical varicella or vaccination.

7vPCV^g–pneumococcal conjugate vaccine recommended for all infants, funded only for Aboriginal and Torres Strait Islander children and children with certain medical risk factors.

23vPPV^h–pneumococcal polysaccharide vaccine recommended only for Aboriginal and Torres Strait Islander children residing in WA, NT SA, and QLD

Conjugation refers to the process of chemically linking the meningococcal serogroup C antigen to a carrier protein, such as diphtheria (Menjugate and Meningtec) to tetanus toxoid (Neis Vac-C) to produce a t-cell dependent response and hence immune memory.

Meningococcal vaccine

Two types of meningococcal vaccines licensed for used in Australia: conjugate vaccines (serogroup C only) and polysaccharide vaccines (types A, C, W135, Y).

There is currently no vaccine available for serogroup B disease in Australia. Currently 3 conjugate vaccines are available: Meningtec, Menjugate and NeisVac-C.

Meningococcal polysaccharide vaccines provide protection against serogroups A, C, W135, and Y. Two vaccines are available Mencevax ACWY and Menomune. The polysaccharide group have several disadvantages. A diminished immune response in children under the age of 2 years. As there is no serogroup A disease in Australia, these vaccines are recommended for travelers to areas where these serogroups are common.

Jennifer Beasley

Neuro-Trainer, Kinesiologist, Naturopath
Advanced Diploma of Naturopathy
Advanced Diploma of Western Herbal Medicine
Advanced Diploma of Nutrition
Diploma of Kinesiology
Diploma of Early Childhood Education, Advanced Diploma in Special Education.
Director of Neuro-Intelligence.

Recuperation to Immunisations. Jennifer Beasley
Clinic: www.neuro-intelligence.com

College: www.kinesiologyinfo.com

Jennifer Beasley has participated in Kinesiology since 1984 and has been in practice for the past 25 years. Operating her private clinics (Melbourne, Lismore (NSW)), Jennifer also holds classes and modules in Kinesiology and Neuro-Training, a Kinesiology Mentorship program and assessments in Kinesiology. Over the years Jenni has studied natural therapies, homoeopathy, counselling, nutrition, massage, energetic healing, Hand and Face Trait reading, Cert IV in Assessment and Workplace Training and a Advanced Diploma in Naturopathy and Diploma in Kinesiology. Currently Jennifer is a member of the Australian Kinesiology Association, Professional Level Three and other professional membership associations for Natural Therapists.

She has also contributed much of her time to the Professional Associations of Kinesiology, both locally and internationally. Jennifer has presented throughout Australia, and USA on Kinesiology and written many articles on the consequences of vaccine exposure, recuperation and the natural laws of healing and solution oriented kinesiology.

With a background in Special Education, specialising in Intellectual Disabilities, Jenni draws much from her former experience in training children and adults with neurological challenges.

In her clinic Jenni combines both Kinesiology and Neuro-Training procedures to retrain people who have never fully recuperated from any life experience, including exposure to toxic substances.

Jennifer is not only a busy Kinesiology practitioner she is also a Trainer and Executive for Neuro-Training Pty Ltd providing the Certificate IV in Kinesiology, Diploma of Neuro-Training and Advanced Neuro-Training classes.

Neuro-Intelligence – Training in Human Excellence.

“What is the best thing to do when vaccinating my child?”

Are you concerned as to what to do?

Your questions answered. -

In all the years of practicing as a Neuro-Trainer, Kinesiologist, and Naturopath, I have looked for easy-to-access, and up-to-date information on vaccinations to provide to my clients, family and friends.

There is so much information out there, sometimes conflicting, single-sided or sometimes, just plain incorrect. Many parents are overwhelmed with the amount of information and what to do with it.

- I wanted to give my clients the best I could deliver, that way, I knew I was doing the best I could for them.
- I wanted to provide them with information on Immunisations that gave them an informed choice.
- I wanted to provide my clients with something at my fingertips, especially in times when this conversation naturally occurred.

One extremely concerned mother came to me with her daughter,

Her 16-year old came to me, sick, tired and fainting.

She had just had her 2nd booster for the cervical cancer immunisation (HPV). Worse, this teen was already very ill for some months, and on other medications. Her mother thought she was doing the right thing because that was what she was told by the school.

All her friends were ill, tired or unwell in some way too.

They could not think or concentrate on their studies because they were so sick. There and then I handed her my report

on the HPV Vaccine. “ I wish I new all this before” said her mother.

Is it too late?, she asked.

No, its not too late!! I answered.

There are many different alternatives to vaccinating your child and much that needs to be discussed concerning possible reactions like this one above.

Some parents wish to vaccinate, some prefer to use natural methods, others do not want to vaccinate at all. This choice is entirely up to you.

Before you do though make that choice, be informed. Understand the alternatives and what they mean.

- Do you fully understand what happens to your child body when they are injected with up to 9 different viruses and bacteria at once?
- Do you know what is in a vaccine syringe?
- Did you know some children are contagious after their vaccines, and this heightens the exposure risk to your unvaccinated child?
- Do you have on hand information to access help if your child does have a bad reaction?
- Do you now what to say when you feel confronted with this subject.
- Do you know that you can ask for a minimal dose for your child?
- Did you know, if you do vaccinate and have a bad reaction there are homeopathic antidotes?

Another 2 year-old girl was brought to me because of high fevers after her last Dpt and polio vaccine. Even after warning the parents of their child's vulnerability, they allowed her to have further vaccines. Again the child was brought to me, now lethargic, pale, dark circles under her eyes, defiant and had regressed in her speech development.

Why did you allow your child to be vaccinated again knowing she has a weakness," I asked?

Because the government won't pay me my single mothers pension if I don't, she answered.

I felt frustrated and sad.

Had the mother known that she does in fact have the right to freely choose not vaccinate and also receive her pension, her child would not have had to experience this.

- You have a choice or your child's long term health.
- Find out about homoeopathic vaccines and nosodes.
- Have this information at your fingertips so that you are clear about your approach.
- It's easy to join. Simple as making a phone call and joining in.
- A one time special of only \$19.95 to join and have your questions answered.

What others are saying about the tele-call recording.

I am grateful to you and what I gained from the telecall session. I am grateful for the shift in my perception. I am now constantly mindful of ALL my interactions with people. Many thanks from my soul. What a great journey I'm on. Ewa Ronacher. Melbourne .

*Don't waste any more time on practices that don't work.
Do yourself a favour and go and see Jenni.
Without a doubt she will do all she can to help you back on the path to wellbeing.*

S.Sykes. Cockatoo. Victoria September 2007
